

draw from facts which have been established by the evidence in this case. Inferences may not be based on speculation or conjecture.

8. CREDIBILITY OF WITNESSES DISCREPANCIES IN TESTIMONY

You, as jurors, are the sole judges of the credibility of the witnesses and the weight their testimony deserves. You may be guided by the appearance and conduct of the witnesses, the manner in which the witness testified, the character of the testimony given, or evidence to the contrary of the testimony given.

You should carefully scrutinize all the testimony given, the circumstances under which each witness has testified, and every matter in evidence which tends to show whether a witness is worthy of belief. Consider each witness's intelligence, motive, state of mind, and demeanor or manner while on the stand. Consider the witness's ability to observe the matters as to which he or she has testified, and whether he or she impresses you as having an accurate recollection of these matters. Consider also any relation each witness may bear to either side of the case; the manner in which each witness might be affected by the verdict; and the extent to which, if at all, each witness is either supported or contradicted by other evidence in the case including statements that he or she may have made on some prior occasion.

Inconsistencies or discrepancies in the testimony of a witness, or between the testimony of different witnesses, may or may not cause you to discredit such testimony. Two or more persons witnessing an incident or a transaction may see or hear it differently; innocent misrecollection, like failure of recollection, is not an uncommon experience. In weighing the effect of a discrepancy, always consider whether it pertains to a matter of importance or an

unimportant detail, and whether the discrepancy results from innocent error or intentional falsehood.

After making your own judgment, you will give the testimony of each witness such weight, if any, as you may think it deserves. You may, in short, accept or reject the testimony of any witness in whole or in part. Also, the weight of the evidence is not necessarily determined by the number of witnesses testifying to the existence or non-existence of any fact. You may find that the testimony of a small number of witnesses as to any fact is more credible than the testimony of a larger number of witnesses to the contrary.

9. OPINION EVIDENCE - EXPERT WITNESS

While the rules of evidence ordinarily do not permit witnesses to testify as to opinions or conclusions, there is an exception as to those persons to whom we refer as “expert witnesses.” These are witnesses who, by education and experience, have become experts in some art, science, profession, or calling, and thus may state their opinions as to relevant and material matters in which they profess to be experts. They may also state their reasons for the opinion.

Expert testimony is considered in the same manner as any other testimony. You should consider each expert opinion received in evidence in this case, and give it such weight as you may think it deserves, whether it was based on personal observations or on hypothetical questions. If you should decide that the opinion of an expert witness is not based upon sufficient education and experience, or if you should conclude that the reasons given in support of the opinion are not sound, or if you feel that it is outweighed by other evidence, you may disregard the opinion entirely.
